## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 19-29 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. The crosslinking of the agent to form a cationic agent, such as described in claim 1 and specification page 3, lines 19-27 and pages 4-10 and examples, critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). The compound that is added to the paper for the production of a tissue is not the intermediate product, in which the nitrogen-containing polymer is reacted with a hydrophobic agent, but the crosslinked product, see pages 3-8 and examples.

### ***Claim Rejections - 35 USC § 102***

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 19-29 are rejected under 35 USC 102(b). This rejection is set forth in the prior Office action paper number 12.

### ***Response to Arguments***

3. Applicant's arguments filed February 10, 2003 have been fully considered but they are not persuasive.

Applicants argue that the cited reference does not teach the hydrophobic chain as claimed. This is not convincing, because Killat teaches the vinyllog addition of a carboxylic acid, same as claimed, to the polyamine polymer and then this product is

crosslinked with a crosslinking agent, epichlorohydrin preferred. This is what applicants do to obtain the wet strength resin, see examples and pages 3-8 and claim 1. Therefore, claims read over the resin taught by the cited reference. The wet strength resin as claimed is misleading since does not recite the further reaction of the resin with a crosslinker, see 112 rejection above.

***Conclusion***

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
